

## FUNDED RESEARCH PROJECTS

---

Professors and researchers from the UPVD's laboratories are heavily involved in researching subjects that stand a good chance of resulting in solutions being developed to the major environmental, industrial and social issues with which we are currently faced. They therefore actively submit proposals in response to invitations to tender at local level (the UPVD's "BQR" quality research bonus which gives preference to funding emerging topics), nationally (the national research agency which funds more advanced projects) or at European level. The funding available therefore makes a significant contribution to the human and technical resources needed to advance our research, as well as increasing its influence and developing the structure of the communities involved.

Date of update June 23, 2015

### KEY FIGURES

Every year on average, the research units coordinate and are involved in:

- **42 national research agency projects**
- **23 European projects**

Every year on average, the UPVD's researchers obtain **€3.8 million of research contracts.**

- **6 LABEX projects**
- **1 EQUIPEX project**
- **1 IDEFI project**
